Thanks for using
Low power waterproof battery
smart light sensors

FS-LBS02W

1.Product introduction

Packing list:

waterproof Light sensor x1

Instructions x1

Prying plate x 1

Screw pack x1

Double-sided stickers x1

Product reset distribution network:

Long press the RESET key next to the battery for 3 seconds, and the LED2 indicator will flash quickly, the reset is successful, and it also enters the distribution network state

Enter the working model test:

After the distribution network is successful, it will enter the "constant power consumption mode test" and automatically enter the "low power consumption mode test" after 60 seconds. "low power consumption mode test" long press the SW2 key for 5 seconds, and the indicator light is normally on to enter the "constant power consumption mode test" for 60 seconds

Product parameters

Parameters	Min	Max	unit
Working temperature	-20	70	Degree
Working voltage	DC3.0	DC3.5	V
Working current	Test	49MHz	mA
Illumination range	0	1000	Lux
Size	78	70	mm
Classification definition	1	3	Degree
Power supply mode			7# dry battery * 2
Detection module			Ohuhi
Protocol			Wi-Fi 4MHz
Shell technology			PVC +Ultraclean

Working mode difference:

Low power consumption model test: report the illumination data every 5 minutes and use the battery for more than three months

Constant power consumption mode test: the equipment reports the illumination data for a long time, and the battery is used for less than one week

2. Install APP

Download APP: Scan the Smart Life app below to download the two-dimensional code, install and complete the registration; login APP after registration to establish their own family.

3.Add device-1

- Install three No.7 dry batteries in no sequence (recommended Rarth), and the indicator light beside the battery will flash quickly, and enter the state of the network to be distributed.(If not, press the RESET key next to the battery for about 3 seconds, and the indicator will flash quickly)
- Open the app, click the "+" sign in the upper right corner, find the security & sensor on the left side of the page, find the wireless smoke, make sure that the indicator light flashes quickly, and click next

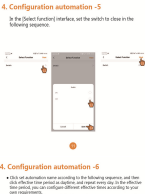
Tips: Ensure that WIFI signals accessible to the Internet with 2.4GHz

3.Add device-2

- If the phone is not connected to WIFI, please connect to the WIFI
- If the phone is connected to the WIFI network, please enter the WIFI password and click OK.

3.Add device-3

- We come to the [Connecting] interface. When progress reaching 100% then the device will complete the distribution network.
- Come to the [Add Device] interface,select a room for the device, Click "finish" after modifying the name of the device.You can see the device now.



4.Configuration automation-1

- Light sensor can be connected to other controllable equipment (such as socket, switch, curtains, etc.)
- On the home page of Smart Life App, click in the following order to [Intelligent Setting] interface in the order shown below

4. Configuration automation -2

Click "+" as shown in the figure to enter the [selection condition] interface, and click "equipment",Then select the light sensor

4. Configuration automation -3

Select linkage conditions as shown in the figure, enter submenu and select "highlight 100-1000lux"

4. Configuration automation -4

Click to select the equipment to perform the action in the following order: "living room lamp"

4. Configuration automation -5

In the [Select function] interface, set the switch to close in the following sequence.

4. Configuration automation -6

- Set up automation name according to the following sequence, and then click effective time period as daytime, and repeat every day in the effective time period, you can configure different effective items according to your actual needs.
- When the light reaches the high light state, it will turn off the lights and save energy; and so on, you can open the curtains, open the lights, close the windows and other automatic actions according to the light brightness.

Warranty card
